

Building electronic office management software for Van Lang Technology Investment and Development Joint Stock Company

Diep Quang Vinh

Abstract: In the context of the strong development of digital technology, building an electronic office administration system (e-OA) is an inevitable need to enhance business operational efficiency. This project aims to design and deploy e-OA software for Van Lang Technology Investment and Development Joint Stock Company, with the goal of optimizing document processing workflows and reducing paper costs. Through a research process based on a combination of theory and experimentation, the project is expected to provide a useful solution, contributing to improving the company's internal governance, while creating significant economic value for the enterprise.
