

Building a documentation process in software development suitable for Web products.

Vi Thi Sam

Abstract: This topic focuses on building an effective documentation process to optimize the software development process for Web products. Through theoretical research combined with experimentation, the topic identifies appropriate documentation requirements and design rules to support the programming and maintenance of software. The expected result will provide a documentation management tool system that helps increase the productivity of Web product development while ensuring the quality and consistency of documentation.

Keywords: Documentation process, Software development, Web products, Document management tools
