

Design and implementation of a Website introducing Telecommunication services of Phu Luong Telecommunication Center, Thai Nguyen

Nguyễn Thị Quyên

Abstract: This topic focuses on the design and implementation of a website to introduce the telecommunications services of the Phu Luong Telecommunications Center in Thai Nguyen. The research context is defined by the rapid development of digital technology, which requires organizations to have an effective online communication channel to reach customers and provide service information. The objective of the topic is to build a professional, user-friendly website that facilitates users in accessing and learning about telecommunications services. The research methodology includes a combination of referencing modern technology and experimental deployment of the application in a web environment. Through this, the topic aims to contribute a practical solution for the Phu Luong Telecommunications Center, while also providing additional knowledge about website design for students in the field of network administration.

Keywords: Telecommunications website, Web design, Telecommunications services, Network administration, Thai Nguyen
