

Building a savings deposit management program at Agribank, Soc Son district branch - Hanoi

Nguyen Trung Thanh

Abstract: In the context of increasingly complex financial management, this topic aims to solve the problem of optimizing the savings deposit management process at Agribank Soc Son District Branch. Through theoretical and experimental research, the project will build an automated savings deposit management system, helping to improve work efficiency for bank employees while ensuring the safety of customers' invested capital. The expected result is the development of information technology applications in bank financial management, contributing to enhancing competitiveness and better serving customers.
