

Building software for managing the lookup of records of social insurance beneficiaries in Thai Nguyen province.

Dao The Hien

Abstract: This topic focuses on building a system for managing and retrieving records of social insurance beneficiaries in Thai Nguyen province, aiming to meet the need for fast and accurate information. Through the research process, we combine theoretical methodology with experimentation to analyze system requirements and deploy suitable software. The expected results contribute to improving social insurance management, providing more effective support for administration and serving the people.
