

Building software for managing staff and salaries at the Agricultural and Fishery Extension Station of Dien Bien District - Dien Bien Province

Pham Vu Dieu Linh

Abstract: This topic aims to solve the problem of effectively managing human resources and salary policies in the agricultural and fishery extension field of the Dien Bien District Agricultural and Fishery Extension Station. Through research, the topic applies an integrated method of experimentation and theoretical study to build modern management software, meeting the requirements for automation and scientific rigor in personnel and salary management. The expected results will contribute significantly to improving work productivity and economic efficiency at the station.

Keywords: management software, staff, salary, agricultural and fisheries extension, automation
