

Research on the salary payment model of construction enterprises through Virtual Bank at Song Da 207 Joint Stock Company - Hanoi

Nguyen Thi Lien

Abstract: This topic aims to survey and propose a salary payment model for employees in the construction industry through a Virtual Banking solution, based on the current situation of Song Da 207 Joint Stock Company. Through theoretical and empirical research, the objective is to optimize the salary payment process to enhance human resource management efficiency while reducing operational costs for the enterprise. The expected results will provide a useful solution for units in the construction industry to apply Virtual Banking technology to their internal financial management systems.
