

Building and developing an electricity fee collection management program at Gia Loc Power One Member Limited Liability Company - Hai Duong Province

Hoang Thi Thuong

Abstract: This topic aims to research and propose solutions for building an efficient electricity bill collection management system, meeting the modernization requirements of Gia Loc Electricity One Member Limited Liability Company. Through analyzing the actual context and needs of the company, the topic focuses on designing and deploying an automated electricity bill collection system based on modern technologies. The research method combines theory with experimentation to ensure the feasibility and effectiveness of the system. The expected outcome is to improve productivity, reduce operating costs, and simultaneously enhance service quality for customers.
