

Building a tax declaration and settlement management program at Dong Hy Tax Department - Thai Nguyen Province

Tong Thi Phuong Mai

Abstract: This topic aims to identify the needs and current status of the tax declaration and settlement process at the Dong Hy Tax Department, Thai Nguyen province. The main objective is to build an automated management system to improve efficiency in processing tax information. The research method combines practical analysis and system design based on modern models. It is expected that the topic will provide technical solutions and management strategies to optimize the tax declaration and settlement process, thereby contributing to enhancing the tax management capacity of the Department.

Keywords: Tax management, Tax declaration and settlement, Information technology, Automated management system, Tax management capacity
