

Building an accounting program for raw materials at No. 1 Investment and Construction Joint Stock Company - Hanoi

La Thuy Quynh

Abstract: This topic focuses on building a material accounting management system for Hanoi Construction and Investment Corporation No.1. The research context is driven by the need to optimize the material management process in production, aiming to ensure the company's financial transparency and efficiency. The objective of the topic is to design and implement a system based on modern accounting principles to improve material management. The research method combines theoretical analysis of asset management with experimentation based on the company's specific requirements. The expected outcome of the topic is not only a technical solution but also a contribution to enhancing the company's financial management capacity.
