

Building a loan interest calculation program for the Mekong Delta Housing Development Bank, Ha Tay branch.

Do Thi Quyen

Abstract: This topic aims to research and develop an effective loan interest calculation support system, meeting the practical requirements of the Mekong Delta Housing Development Bank, Ha Tay branch. Through synthesizing and analyzing modern interest calculation methods, the topic applies a combined approach of theoretical research and experimentation to build an automated calculation program. The expected results will provide the bank with a more effective interest rate management tool, thereby enhancing competitiveness and meeting customers' credit needs.

Keywords: Loan interest calculation, Housing Development Bank, decision support system, Ha Tay branch
