

Building accounting software for raw materials at GBF Construction and Trading Joint Stock Company - Hanoi

Nguyen Thi Hoai

Abstract: In the context of increasingly professionalized financial management, this topic focuses on developing a material accounting software system for GBF Construction and Trading Joint Stock Company in Hanoi. The project aims to optimize the control of material costs through the automation of accounting procedures. The research methodology combines financial management theory with empirical system implementation. This will be a crucial solution to help GBF Company enhance management efficiency and reduce financial risks related to materials, while contributing to the development of Vietnam's construction industry.

Keywords: accounting for raw materials, financial management software, construction works, automation system
