

Building an accounting program for materials for Truong Minh Company Limited - Hanoi

Pham Thi Tuyen

Abstract: This topic focuses on building an intelligent material accounting management system to improve the operational efficiency of Truong Minh Company Limited in Hanoi. Through practical analysis and theoretical research, the objective is to develop a solution that automates reporting processes, inventory tracking, and cost management related to materials. The applied methodology includes both market research and experimentation with an integrated system. The topic is expected to make a significant contribution to enhancing the financial management capacity of the enterprise.

Keywords: Material accounting, accounting automation, inventory management, Truong Minh Company Limited, Hanoi
