

Building a payroll accounting program at Binh Gia Medical Center - Lang Son

nan

Abstract: This topic aims to research and build an effective payroll accounting management system for the Binh Gia Medical Center, Lang Son. The current situation at the center is meticulous but does not meet modern requirements for human resource financial management. The objective of the topic is to design and deploy an automated system to optimize workflows and enhance accuracy in salary distribution. The research methodology includes analyzing the current situation, building a model, and deploying a practical application. The expected results will significantly improve payroll management performance, while laying the foundation for further improvements.

Keywords: Payroll accounting, human resource financial management system, automation
