

Building a library management program at the College of Technology and Industrial Economics

Ngo Thi Chieu Mai

Abstract: This topic focuses on designing and implementing an effective library management system at the College of Industrial Technology and Economics. This is an important issue because organizing and accessing information in an educational environment is becoming increasingly complex. The objective of the research is to build a solution that optimizes document management processes and enhances the efficiency of learning and research services. The research method combines referencing modern library management models with experimentation at the school. The expected results will bring significant improvements in information management, while providing a foundation for the sustainable development of the library system.
