

Application of online payment in building an e-commerce trading platform at the Thai Nguyen Information and Communication Technology Center.

Nguyen Khanh Phuong

Abstract: This topic aims to research and apply online payment to the development of an e-commerce trading platform at the Thai Nguyen Information Technology and Communication Center. The topic was chosen due to the practical need to promote the development of e-commerce in the locality. The main objective of this research is to build a safe, convenient, and efficient online payment system for the trading platform. The method applied combines theory and experimentation to ensure the feasibility and applicability of the system. The expected results will contribute to improving customer experience and enhancing the center's competitiveness in the field of e-commerce.

Keywords: online payment, e-commerce, Information Technology Center, trading platform
