

Building and developing the cash accounting subsystem program at Gia Loc - Hai Duong One Member Limited Liability Electric Company.

Tran Thi Nhung

Abstract: This study aims to meet the effective financial management requirements of Gia Loc - Hai Duong One Member Limited Liability Electricity Company through the development and implementation of a cash-based accounting subsystem. The objective is to improve accuracy and automation in the bookkeeping process, ensuring compliance with current financial regulations. The research methodology includes experimentation and deployment of software applications in a real-world environment. The expected outcomes of the project not only enhance work productivity but also contribute to the development of effective financial management within the enterprise.
