

Design of an electronic perpetual calendar

Nguyen Manh Linh

Abstract: In the context of rapidly developing information technology, the use of electronic perpetual calendars to improve time management efficiency and enhance user experience has become essential. This topic focuses on designing an electronic perpetual calendar system based on current advanced technologies. Through a combination of theoretical research and experimentation, the topic aims to develop an effective and user-friendly solution to support users in managing and arranging event schedules scientifically. The expected results of this topic will make significant contributions to the field of information technology and have the potential for widespread application across various industries.
