

Optimizing BTS frequency for MobiFone Thai Nguyen network

Nguyen Thu Ha

Abstract: This topic focuses on optimizing the BTS (Base Transceiver Station) frequency of the MobiFone mobile network in Thai Nguyen province to address issues related to performance and mobile service quality. Through a combination of theoretical research and experimentation, the goal is to build a BTS frequency optimization system. The expected results from this topic will contribute to improving mobile network quality, enhancing customer service capabilities, and reducing operational costs for MobiFone.

Keywords: BTS frequency optimization, MobiFone Thai Nguyen, frequency management, mobile services, performance improvement
