

Building a File Manager application on the Android operating system

Vu Thi Hao

Abstract: This project aims to design and implement an efficient File Manager application for the Android operating system, meeting the diverse file management needs in daily life. By studying the theory of file management on Android combined with practical application development, this project expects to contribute to the advancement of mobile technology and improve user experience. Through the implementation process, the application will be evaluated based on metrics such as access speed, customizability, and utility in file management.
