

Building an alumni information management application for the Communications and Computer Networks major on the Android operating system.

Nguyen Thi Phuong

Abstract: In the context of the rapid development of information technology, managing alumni information in the field of Computer Networks and Communications has become important. This project aims to build a mobile application on the Android platform to help store and retrieve information quickly and efficiently. Through a combination of theoretical research and practical implementation, the project seeks to provide an optimal solution for educational institutions and organizations in this field. The results of the project not only enhance interaction between students, alumni, and the school but also contribute significantly to improving the quality of information management in the industry.
