

Building a personal note-taking application, backing up contacts and messages on the Android platform.

Le Van Truong

Abstract: This topic focuses on building a mobile application that integrates personal note-taking, contact backup, and message management functions on the Android platform. The context of the topic is based on the necessity of comprehensive solutions to support users in organizing personal information effectively. The main objective is to develop a mobile application system to meet this requirement, combining theoretical research with experimentation to ensure stability and data security. The expected results provide a flexible and convenient solution for users while contributing to the field of mobile information technology.

Keywords: Android app, Personal notes, Backup, Contacts, Messages
