

Build an application to look up the uses of certain herbal remedies.

Hoang Thai Son

Abstract: This topic aims to research and develop an information retrieval system on the uses of various medicinal herbs. To address the need for fast and accurate access, while meeting user requirements in learning about herbs, we will apply a method of synthesizing data from multiple reputable reference sources and performing statistical analysis to build the system. The ultimate goal is to provide a useful tool for the medical community as well as individual users. The expected outcomes of this topic will not only improve people's access to information but also contribute to enhancing the quality of healthcare for the entire society.

Keywords: Herbal lookup, Herbal uses, Medical information system
