

Building a children's book library application on the Android platform

Nguyen Anh Hien

Abstract: In the context of online education becoming increasingly popular and important in supporting children's learning, this project aims to build a book repository application specifically for children on the Android platform. Through theoretical research combined with practical implementation, the main goal is to create a utility solution that helps children easily access and use age-appropriate e-books. The expected results contribute to the development of educational technology and provide effective support for children's learning process.

Keywords: Android application, e-book library, online education, learning app for children, mobile application development
