

Design and build a network system for Viet Tam Duc Trading and Education Joint Stock Company with the application of some security measures.

Luong Van Huong

Abstract: In the current context, establishing a safe and efficient network system has become an urgent requirement for business and educational organizations. This topic aims to build and deploy a network solution for Viet Tam Duc Trading and Education Joint Stock Company, while applying advanced security measures to ensure stability and information safety. Through theoretical research combined with experimentation, the topic will evaluate and select the most suitable network technologies for the company's specific needs, thereby providing a solution to optimize operational performance while enhancing data protection capabilities. The expected result is to build a robust, flexible network system that fully meets information security requirements.
