

Deploy ISIS routing protocol on IPv4 and IPv6 for small and medium enterprises.

Phan Đình Kiên

Abstract: In the context of an increasingly developing information network, ensuring stability and efficiency in data transmission has become important. This topic focuses on researching and deploying the ISIS routing protocol on IPv4 and IPv6 platforms for small and medium enterprises. The objective of the topic is to build an efficient routing system that meets the requirements of flexibility and information security in a network environment. By combining theoretical research with experimental deployment, the topic aims to provide a reliable solution to improve service quality for small enterprises. The results of this study can play an important role in promoting the development of network infrastructure in urban and rural areas.

Keywords: ISIS routing protocol, IPV4, IPV6, Dynamics, Small and medium enterprises
