

Learn about VoIP technology and deploy an Asterisk PBX.

Nguyen Van Nam

Abstract: This topic aims to explore and evaluate Voice over Internet Protocol (VoIP) technology, with a focus on deploying an Asterisk PBX system. This is a necessary step in the modern context, as the demand for voice services over the Internet continues to increase. The topic approaches the problem by studying VoIP theory and conducting experiments on the Asterisk PBX platform. The expected results from this topic not only provide useful information for software developers but also contribute to enhancing understanding of the application of VoIP technology in business practice.

Keywords: VoIP, Asterisk PBX, system deployment
