

ASA FreWell application to build a cybersecurity system for Thai Nguyen Province Post Office.

Cam Thi Chien

Abstract: In the context of increasing cyber threats to information systems in large organizations such as the Post Office, this topic aims to address the problem of protecting and enhancing network security through the application of the ASA FreWell model. Through a combination of theoretical research and experimentation, the project will deploy an effective network security system at the Thai Nguyen Provincial Post Office, contributing to ensuring the integrity and security of the organization's critical data.
