

Building an internship management program for the Faculty of Electrical, Electronics and Telecommunications at Thai Nguyen University of Information and Communication Technology.

Hoang Tien Dung

Abstract: This study aims to establish an effective management system for internship activities at the Faculty of Electrical, Electronics, and Communication Engineering, meeting the need to modernize the learning process and skill development for students. By combining theoretical research with experimental implementation, the project has identified key factors in internship management and developed a comprehensive solution. The expected results will contribute to improving training quality while promoting cooperation between the university and enterprises.
