

Build a website introducing special tours of the northern mountainous provinces using the jQuery Mobile library.

Nguyen Huu Trung

Abstract: In practice, the promotion of tourism in the northern mountainous provinces via the internet still faces many limitations. This project aims to address this issue by building a highly interactive website to introduce distinctive tours of the northern mountainous provinces, using the jQuery Mobile library for powerful and user-friendly interface effects. Through a combination of theoretical research and experimentation, this project is expected to contribute to promoting the development of local tourism as well as raising awareness of the unique destinations in the northern mountainous region.
