

Building a website for Viet Tam Duc Trading & Education Joint Stock Company using Responsive - Bootstrap 3 Web Design technology.

Hoang Van Tuan

Abstract: In the context of strong digitalization, building a website that aligns with responsive design trends is an urgent need for Viet Tam Duc Trading & Education Joint Stock Company. This project aims to develop a web interface using Bootstrap 3 technology with the ability to automatically adjust the layout according to screen size, in order to optimize user experience across multiple devices. Through theoretical research and direct experimentation, the project hopes to contribute to the diversification of the company's digital products while meeting requirements for high performance and compatibility.
