

Building human resource management software for Viet Bac - Thai Nguyen University

Vu Xuan Truong

Abstract: In the current context, the efficiency of human resource management at higher education institutions needs to be improved to meet the increasing demands of the innovation and development process. This topic focuses on developing a human resource management software for Viet Bac - Thai Nguyen University to automate the recruitment, evaluation, and employee development processes. Through thorough research on information technology and practical application deployment based on the university's actual database, the project aims to provide an effective management solution for educational organizations. The expected results will bring convenience, time savings, and enhanced human resource management capacity.
