

Building an online university entrance exam preparation application on the Android operating system

Mac Van Duy

Abstract: In the context of education increasingly developed and popularized through technology, building an online university entrance exam preparation application on the Android platform meets the needs of students who want to study effectively. The objective of the project is to design and implement a system that helps learners track their learning progress and improve skills based on mock tests. The research method combines online education theory with experimentation to build a suitable application. The expected results provide a useful solution for both schools and students, while contributing to the trend of modern teaching.
