

Building software to help children learn letters on the Android operating system

Pham Thi Dieu

Abstract: This project aims to address the need for supporting alphabet teaching and learning for young children through a mobile application on the Android platform. The objective of the research is to design and implement an interactive educational software that integrates engaging learning activities to create a favorable learning environment for children's development. Through the experimental process, the project not only provides an effective technical solution but also contributes to the field of online education, enhancing the quality of education for children in the digital age.
