

Building software to find university exam scores in Thai Nguyen city on Android OS

Dao Thi Thanh

Abstract: In the context of the increasing demand for accessing exam score information for the university entrance exam, this topic focuses on building a mobile application that allows users to easily look up exam scores at educational institutions in Thai Nguyen city. Through theoretical research and experimental implementation on the Android operating system, the developed software will provide convenient services for students, parents, and teachers. The objective of the topic is to ensure accuracy and efficiency in accessing exam score information, contributing to the digital development of the city. The expected results of this research will include a stable application product that meets practical needs while leveraging the potential of mobile technology.
