

Building an information lookup program via text messages at Yen Bang Secondary School, Nam Dinh.

Vu Van Hieu

Abstract: In the modern context, quick and convenient access to information is an essential need for students. This topic aims to solve the problem of providing information lookup services via text messages at Yen Bang-Nam Dinh Secondary School. Through a combination of theoretical research and experimentation, the topic builds a system to provide useful information services for students and teachers. The project's goal is to create an effective solution to improve the quality of education and school management. The expected results of the topic will not only contribute to the education sector but also bring practical benefits in developing information technology to serve learning.
