

Research the real-world software project development process, study automated testing methods and apply them to software system testing for VIEGRID company.

Truong Thi Ha

Abstract: This topic aims to analyze and design a software project development process suitable for the specific requirements of VIEGRID company. Through theoretical research combined with experimentation, the topic focuses on applying automated testing methods to enhance the efficiency of software system testing. The expected result is to build an effective automated testing process, contributing to improving software product quality and supporting the project development process in practice.

Keywords: Software development process, automated testing, VIEGRID company, software project management, software system
