

Building a support and consultation program for university admissions for the School of Information and Communication Technology at Thai Nguyen University.

Đinh Đức Dũng

Abstract: In the context where university admissions have become a major challenge for universities, this topic aims to research and build an effective admissions consulting support system. The goal is to improve the experience of candidates by providing accurate information about majors and admission processes, while optimizing the admissions capacity of the University of Information and Communication Technology, Thai Nguyen University. Through theoretical and experimental research, the topic is expected to propose a comprehensive solution to enhance the quality of admissions and meet the diverse needs of candidates.
