

Research on Restful web service technology. Application in building an e-wallet system.

Nguyen Hoang Long

Abstract: In the context of the strong development of online services, research on RESTful Web Service technology has become extremely important. This topic focuses on analyzing and evaluating the benefits of RESTful Web Services in building an e-wallet system. The goal is to solve the problem of ensuring flexibility, ease of expansion, and integration of various services within the system. The research method combines theory with experimentation, focusing on designing and deploying an e-wallet system based on RESTful Web Services. The expected result is to build a safe and efficient system, contributing to the development of digital financial technology.

Keywords: RESTful Web Service, e-wallet system, digital financial technology, online service integration, system design
