

Building an application that compiles medicinal plants and remedies available in nature for Android.

Nguyen Truong Xuan

Abstract: In the context of growing interest in traditional medicine, this topic focuses on developing an Android application to aggregate information about medicinal plants and remedies derived from nature. The project aims to create a practical tool that helps users easily search for and correctly use herbal medicines available in nature. Through theoretical research and application deployment, this topic not only provides a technical solution but also contributes to spreading knowledge about traditional medicine. The expected outcome of the project is to develop a useful, easy-to-use application with high practical value.

Keywords: Android application, natural medicinal plants, traditional medicine, herbal lookup, medical technology
