

Building a website to manage services for Dạ Hương Hotel in Thai Nguyen.

Luong Nhu Thien

Abstract: This topic focuses on building a website management system to support the business operations of Dạ Hương Hotel in Thai Nguyen province. The context for proposing the topic is based on the need to realize the digitalization process of local tourism services, aiming to enhance efficiency and experience for both hotel owners and end users. The objective of the research is to build a versatile information management system on the web, including booking management, service management, and a user-friendly interface. The research method combines surveying actual needs and deploying modern technology applications to ensure the system's high flexibility and efficiency. The expected results will contribute to the digitalization of local tourism, while creating an advanced hotel service management solution.
