

# **Building a story reading application on the Android operating system**

**Nguyen Manh Tuan**

**Abstract:** In the context of the growing demand for online reading, this topic focuses on building a unique application on the Android operating system to serve users. The project aims to design and implement an easy-to-use interface with features such as automatic book downloading, quick search, and private reading storage. The research methodology includes both experimentation and application deployment to evaluate performance and functionality. The expected results will provide a modern technical solution for the online reading service industry, contributing to an improved user experience.

**Keywords:** Android application, Online story reading, Mobile operating system
