

Building an online news reading application on the Android operating system

Nguyen Duy Chung

Abstract: In the context of an increasing number of people using mobile devices to update information, this topic aims to address the shortage of specialized applications for reading and sharing news on the Android operating system. The objective of the research is to build a unique application with a user-friendly interface, featuring fast functionality to collect and present the latest information from multiple reputable news sources. The approach includes theoretical research on mobile application development technology combined with experimentation to deploy the application on Android Studio. The expected result is to provide a useful solution for users, while contributing to the diversity and quality improvement of existing news applications.
