

Build an online multiple-choice test website using PHP

Nguyen Van Tap

Abstract: In the context of the growing development of online education, this topic focuses on building a web system for organizing online multiple-choice tests. The project aims to provide an effective solution for managing and conducting remote exams using the PHP programming language. Through theoretical research and application implementation, the topic hopes to contribute a robust interactive system for both students and teachers. The expected result is a flexible and secure web platform suitable for various types of multiple-choice tests.
