

Build the "application management" app on the Android operating system.

Le Tuan Phong

Abstract: In the context of application management on the Android system becoming increasingly complex and important, this topic focuses on designing and deploying an application that helps users easily track and organize installed applications. The main objective of the topic is to build an effective management system to optimize storage space and enhance the mobile phone user experience. The research method is based on a combination of user requirement analysis and practical application deployment. The expected results of the topic are not only academic, providing an effective application management solution, but also have potential for application in mobile application development enterprises.

Keywords: Application management, Android, Mobile application development, Application deployment, Storage space optimization
