

Building an online management system for practice and experiment equipment for Na Hang High School

Ly Tai Minh

Abstract: This topic aims to overcome the inefficient management of practice and experiment equipment at Na Hang High School. The objective is to build an online management system with the purpose of optimizing the use and maintenance of various types of equipment. The research methods include field surveys, needs analysis, and the application of information technology to develop the system. The expected result is that the topic will improve management efficiency and facilitate access to and use of experiment equipment.
