

Building a software development application, programming skills to successfully build the The Future Center promotional application on iOS.

Tran Trong Nghia

Abstract: This topic focuses on building a mobile application aimed at promoting The Future center for iOS users. The context for selecting this topic is based on the need to enhance customer access to information about the center's services through a modern digital platform. The main objective is to develop an effective, user-friendly application integrated with essential features to provide a good user experience. Through theoretical and experimental research, the topic is expected to contribute to improving the center's service quality through optimal technical solutions.

Keywords: iOS mobile application, Software development, Business promotion, Programming skills, The Future Center
