

Building a program to support teaching letters to children on the Flash platform

Phan Ngoc Tan

Abstract: In current educational practice, developing effective teaching methods is extremely necessary. This topic focuses on building a letter teaching support system for children through the Flash platform. The research aims to create a multimedia learning program with high interactivity to enhance educational effectiveness. The research method combines educational theory with applied experimentation on a sample. The expected results will contribute to improving children's literacy skills and expanding access to multimedia education.
