

Build a chat application on Node.js.

Nguyen Duy Nga

Abstract: In the current context, the demand for instant communication through chat applications is increasing. This topic aims to solve the problem of building an efficient and flexible chat system based on the Node.js platform. Through theoretical research combined with practical implementation, the topic contributes to improving knowledge about Node.js technology in the field of web application development. The expected result is to create a stable chat solution that effectively meets user needs.
