

Building a management website for the 19/05 preschool in Thai Nguyen City, Thai Nguyen Province

Le Son Lam

Abstract: This topic aims to research and build a website management system for the 19/05 preschool in Thai Nguyen province. Through a practical analysis of the school's need for effective information management, the goal is to develop a technical solution that enhances online content management capabilities, meeting contemporary technological requirements and preschool education regulations. The research method is based on a combination of practical analysis and website design using HTML5 & CSS3 standards. The expected result is a professional, user-friendly website system that makes a significant contribution to improving local preschool education management.
